

## Circuit development-Accept customization

In the field of circuit development for the optoelectronic industry, we focus on the design and integration of core circuits for optoelectronic systems. This includes key functional modules such as laser control circuit boards and laser power supplies. We can provide customized development services based on customer requirements, which are widely compatible with application scenarios such as fiber optic communication networks and laser processing equipment, creating efficient and reliable circuit solutions for various optoelectronic products.

### ■ Product features

- Low power consumption
- Scalability
- Modular design
- Excellent stability

### ■ Typical applications

- Fiber Amplifiers
- Fiber Lasers
- Fiber Optic Communication Systems
- Laboratory research
